THE INVENTORY SOFTWARE SOLUTION
YOU CAN RELY ON.

VISUAL IMPORT MANAGER

Visual Import Manager

Our SIMMS Visual Import Manager provides a comprehensive solution for importing your important inventory item data, customer/vendor data as well as quotes, all from an easy to use program - Visual Import Manager.

“Open architecture” is the catch phrase for business application software and databases these days. Companies that in the past may have put up with discrete applications running stand-alone, and performed software “gymnastics” to obtain integrated reporting from their tools, are now demanding that these products work together. To facilitate this process, an industry standard known as open database connectivity (ODBC) was developed. The SIMMS Visual Import Manager has been designed to facilitate seamless integration between SIMMS data and Microsoft Access. The SIMMS Visual Import Manager can import from Microsoft Access, without the need for an intermediary data file such as ASCII delimited or Microsoft Excel. If you regularly perform imports from a custom or vertical software package, you'll find you can use Visual Import Manager to make the integration virtually seamless.

Robust import resources and comprehensive functionality include:

- Import inventory item items
- Import customer information
- Import vendor information
- Import location codes
- Import stock information
- Import quotes
- Intelligent field mapping
- Easy to understand results
- Simplified user screen for easy usage
- Easily import your data from Microsoft Access
- ODBC compliant

Importation of data with SIMMS Visual Import Manager is as simple as it gets. If you use SIMMS Software, Visual Import Manager is what you need to tie all your business software into one seamless application.

The SIMMS Visual Import Manager provides a comprehensive solution for importing your important inventory item data, customer/vendor data as well as quotes.
